

MICROGARD®

OE ENGINEERING IMPROVEMENTS

At MicroGard, we are the OE problem solver. Our team has the capabilities of re-engineering problematic cabin air filters to provide improved fitment. This ultimately allows **easier installation** and **saves time** for the installer.

3038

Application: Dodge Caravan, Grand Caravan - Chrysler Pacifica, Town & Country, Voyager

Slits Added for Smoother Installation Less Restriction = Faster Installation

This filter is located under the dash on the passenger side of the vehicle. The clearance between the filter housing and the floor is limited. This design improvement allows the filter to smoothly feed into the housing, eliminating potential damage to the filter during installation.

3056

Application: Nissan Quest

Tabs Added for Effortless, Fast Removal and Installation

The Nissan Quest application is unique because there are two filters stacked in the filter housing. The stacking design can make the bottom filter difficult to extract from the housing when replacing. This design improvement integrates tabs into the side panel eliminating the need to “fish” for the lower filter when changing the filter.
